

# Report and Comply with Greater Accuracy and Ease

NextGen® HQM

## The value of the care you deliver

Gathering the data needed for quality reporting and regulatory compliance is a burden if completed manually—and if not done properly, can jeopardize quality reimbursement. NextGen HQM reporting module enables seamless data collection and reporting to the Centers for Medicare and Medicaid Services (CMS) Quality Payment Program. With over a decade of experience as a CMS Qualified Registry, NextGen HQM provides you with the opportunity to take your next steps in value-based care, no matter where you are in your MIPS journey.

## NextGen HQM eliminates time-consuming data collection

Fully integrated with NextGen® Enterprise EHR and NextGen® Enterprise PM, NextGen HQM efficiently gathers the data needed to report quality measures to multiple CMS programs and qualify for financial incentives. The solution enables providers to focus on patient care and improved outcomes instead of data gathering and reporting.

NextGen HQM supports three categories of MIPS (Promoting Interoperability, Quality, and Improvement Activities) and the Medicaid Promoting Interoperability program. Advanced Payment Model (APM) programs, such as the Comprehensive Primary Care Initiative (CPC+), Primary Care First (PCF), and Accountable Care Organizations (ACO) are also available in NextGen HQM.

## The benefits of NextGen HQM

- No additional charges for basic reporting and submission functionality
- Direct submission results in higher scores for providers (up to six bonus points are possible)
- Submission to CMS is streamlined and simplified
- No manual downloading/uploading to CMS is required
- Ability to use the configurations providers have tracked all year
- Preview score visualization prior to submission
- Achieve top scores in MIPS/MACRA
- Prove the value of care you deliver to payers and stakeholders
- Understand ever-changing rules and compliance requirements

## Move the needle on quality performance

Begin tracking and measuring at the beginning of the year, so you'll never miss key metrics. Extract data at least once a week so you can continuously monitor performance throughout the year and make adjustments to ensure that you'll get the results you need.

NextGen HQM also helps providers and care managers target treatment opportunities. Practices can leverage NextGen HQM reports to track performance throughout a reporting period and make improvements long before data is submitted.

## Why integration with your EHR and PM is vital

NextGen HQM is fully integrated and seamlessly collects clinical and demographic data from NextGen Enterprise EHR, on the schedule you set, assisting healthcare organizations to identify patient treatment opportunities within your selected quality measure populations to drive efficiency and improve performance with ease.

All providers will want to install HQM to automate performance tracking for the CMS Quality Payment Program (QPP) and related programs. The tracking reports and direct submission capability to CMS are supported for NextGen Enterprise clients at no cost when they choose to sign the HQM addendum and share their data.

## Who needs quality reporting capabilities?

Healthcare providers looking to measure the quality of care provided to patients and capitalize on Pay-for-Performance (P4P) programs (e.g., ACO, CPC+, and look-alike programs), participate in value-based care programs and earn incentive payments, or providers who simply want to report to avoid a negative payment adjustment.

“The HQM team is very knowledgeable about the product and quality programs, and is quick to assist clients with any workflow issues.”
